1 Introduction

Software systems are an essential part of modern society and when they fail to function as intended, the implications can be enormous. It is therefore vital that systems are built to minimize the possibility of failure and that, when failures do occur, effective diagnostic processes expedite the systems recovery and prevent the recurrence of failures.

To address this need, this document presents a framework called the Design Learning Platform (DLP) that automates the development and management of intelligent software systems.

2 The Design

2.1 Meaning of the World

2.2 Narrative of the World

2.3 Reasoning about the World

2.4 Shared Meaning

2.5 Semantic Invalidity

3 Computable Semantic Model

4 Semantic Toolkit and Automated Development

5 Semantic Reasoning Engine

6 Domain Specific Compression

Design Learning Platform

Figure 1: The Design Learning Platform

7 Design Learning Platform

8 Deterministic Intelligence

9 Conclusion
